

Table of Contents

- Preface
- 1 *Answering Questions About Helicopters*
- Hover performance
Figure of merit
The extremes
Flying fast
On the other side
Bypassing the limit
Sikorsky S-69 ABC Demonstrator
High load factors
Rotors are different
Maximum rotor load factor
What can the designer do?
Other options
- 2 *Progress In Helicopter Aerodynamics**
- CFD
Wind-tunnel testing
Flight testing
Conclusion
- 3 *Hover Power*
- Momentum Theory
Design Tradeoff
Maximum Disc Loading
Vertical Drag
Blade Element Theory
Figure of Merit
Interference Effects
Engine Power
Engine Derating
- 4 *Hover Figure of Merit & Forward Flight Ratios*
- Figure of merit
Hover vs. forward flight
More complications
Distortions
Slicker or skinnier blades
- Rotor lift-to-drag ratio
Facts of life
- 5 *Ground Effect in Hover*
- Testing
Velocity ratios
Secondary effects
- 6 *Aerodynamic Environment at the Rotor Blade*
- Angle-of-Attack Distribution
Download on the Advancing Tip
Reverse-Flow Region
Collective and Cyclic Pitch
Maneuvers
Stall and Compressibility
Dynamic Stall—Lift
Dynamic Stall—Drag and Moment
Effect of Stiffness
Compressibility
Pilot Cues
Swept Tips
- 7 *Is The Rotor A Gyro?*
- A rotor in air
A rotor as a gyro
- 8 *The Rotor Wake*
- And up through the center
The ABC shuffle
Tip vortices
- 9 *Vortex-Ring State*
- Resurrecting the question
Windmill in the air
Vortex-ring characteristics
Blade-twist effects
What's the difference?
Main rotor-tail rotor interference
Direction of tail-rotor rotation
Right sideward flight
- 10 *Downwash Patterns*
- They come and they go
